

CosmoPAGE Pre-cast Gels

produced by Nacalai USA

The CosmoPAGE pre-cast gel is ideal for protein electrophoresis. The unique formulation of polyacrylamide provides the best resolution, most strength, best transfer efficiency, and longest shelf life. CosmoPAGE pre-cast gels are available in two product lines: SDS Gel and Native Gel. Each product line has gels available in 1-well, 12-well and 17-well formats for high-throughput protein electrophoresis. CosmoPAGE SDS Gel is also available for 2D electrophoresis. CosmoPAGE Native Gel is suitable for nucleic acid electrophoresis as well.

Most strength: no worry of tearing of gel when handling

no worry of cracking of gel when drying

CosmoPAGE dried 12% SDS
(Colloidal G-250 stain)

Competitor 4-12% MOPS
(Gel shrinks in alcohol)

Regular acrylamide gels can tear on handling and crack on drying

Pre-cast Gels

CosmoPAGE Pre-cast Gels

produced by Nacalai USA

Highest resolution : unambiguous protein band detection

CosmoPAGE 4–20% SDS

Competitor 4–12% MES

Note: "Foot" from side slot must be cut off to blot or dry gel

Longest shelf life: 18 month guarantee ensures consistent performance

2-weeks old

1-year old

Virtually Identical Results after One Year

• Gel size

They fit into the CosmoPAGE Dual Run & Blot unit and all Invitrogen™ XCell™ units.

Electrophoresis and blotting system

CosmoPAGE Dual Run and Blot System

produced by Nacalai USA

The CosmoPAGE Dual Run & Blot Cell is the next generation dual functional apparatus for electrophoresis and western blotting transfer. The ingenious design allows using the same buffer core for both running and blotting gels up to 9 cm x 9 cm, as well as exploiting voltage gradient for better transfer efficiency for complete transfers of all proteins (and oligonucleotides). The inner chamber of the cell can be securely sealed outside the cell making it easier to see sample wells when loading. With symmetrical cell, the CosmoPAGE Dual Run & Blot Cell runs and blots two gels at the same speed without the hassle of difference in running time.

- Features
 - **Dual function** for both electrophoresis and blot
 - **Super transfer efficiency** for complete transfers of all proteins
 - **Secure seal** - no worry of leaking and easy to see sample wells
 - **Symmetrical design** allowing two gels to run or blot at the same speed

Molecular Weight Markers

Prestained Protein Markers for SDS-PAGE

Easy identification: alternate blue and violet stained bands

Great lot-to-lot consistency: for reliable comparison

- Features
 - Only small amount to use: high concentration of prestained proteins.
 - Marker proteins are visible during electrophoresis.
 - Prestained bands remain visible after the gel is stained (CBB, silver, negative)
 - Color remains the same even after blotting
 - For CBB staining, silver staining (1:100 dilution) and negative staining (1:100 dilution)

Staining

Rapid Stain CBB Kit

- Quick:** staining and destaining are completed within 30 minutes
Simple: just mix the kit components with purified water
Highly sensitive: detect as little as 20ng protein

Application

Conditions

Gel : 12.5% Polyacrylamide Gel (Laemli)
 Buffer solution : Tris/Glycine buffer solution
 Electrophoresis : 30 mA constant current, 50min

Sample

Human serum
 Lane1 : marker
 Lane2 : 5,000 ng
 Lane3 : 2,500 ng
 Lane4 : 1,000 ng
 Lane5 : 750 ng
 Lane6 : 500 ng
 Lane 7 : 250 ng
 Lane 8 : 100 ng
 Lane 9 : 70 ng
 Lane10 : 40 ng
 Lane11 : 20 ng

Coomassie Brilliant Blue G-250

Description

M.W. 854.02

Protein stain for gel electrophoresis. Coomassie Brilliant Blue G-250 does not penetrate the gel and is three times more sensitive than Amido Black 10B (Naphthol Blue Black B). It can also be used in rapid, simple and sensitive protein concentration assays. Free amino acids and several chemicals that interfere with the Lowry procedure cause no interference when using Coomassie Brilliant Blue.

Coomassie Brilliant Blue G-250	Room Temp.	09409-42	25 g

Coomassie Brilliant Blue R-250

Description

M.W. 825.97

Protein stain for gel electrophoresis. Coomassie Brilliant Blue R-250 is 5 to 10 times more sensitive than Amido Black 10B (Naphthol Blue Black B) and Bromophenol. As little as 0.5 µg/cm² of protein can be detected in a gel matrix. Free amino acids and several chemicals that interfere with the Lowry procedure cause no interference when using Coomassie Brilliant Blue.
